TACERA with IP Connect

TACERA with IP Connect was developed by Austco to empower nurses with technology, information and communications. This enhances the care delivery process with measurable improvements to the patients' quality and experience of care.

Total IP Solution Another World 1st for Austco

Tacera is the world's first true IP solution where all system components are fully IP configurable and have their own unique address for best in class supervision and system management. Nurse stations and Patient stations use SIP VoIP (Voice over Internet Protocol) offering non-blocking audio connectivity when integrating wired and wireless solutions on your existing IT infrastructure.

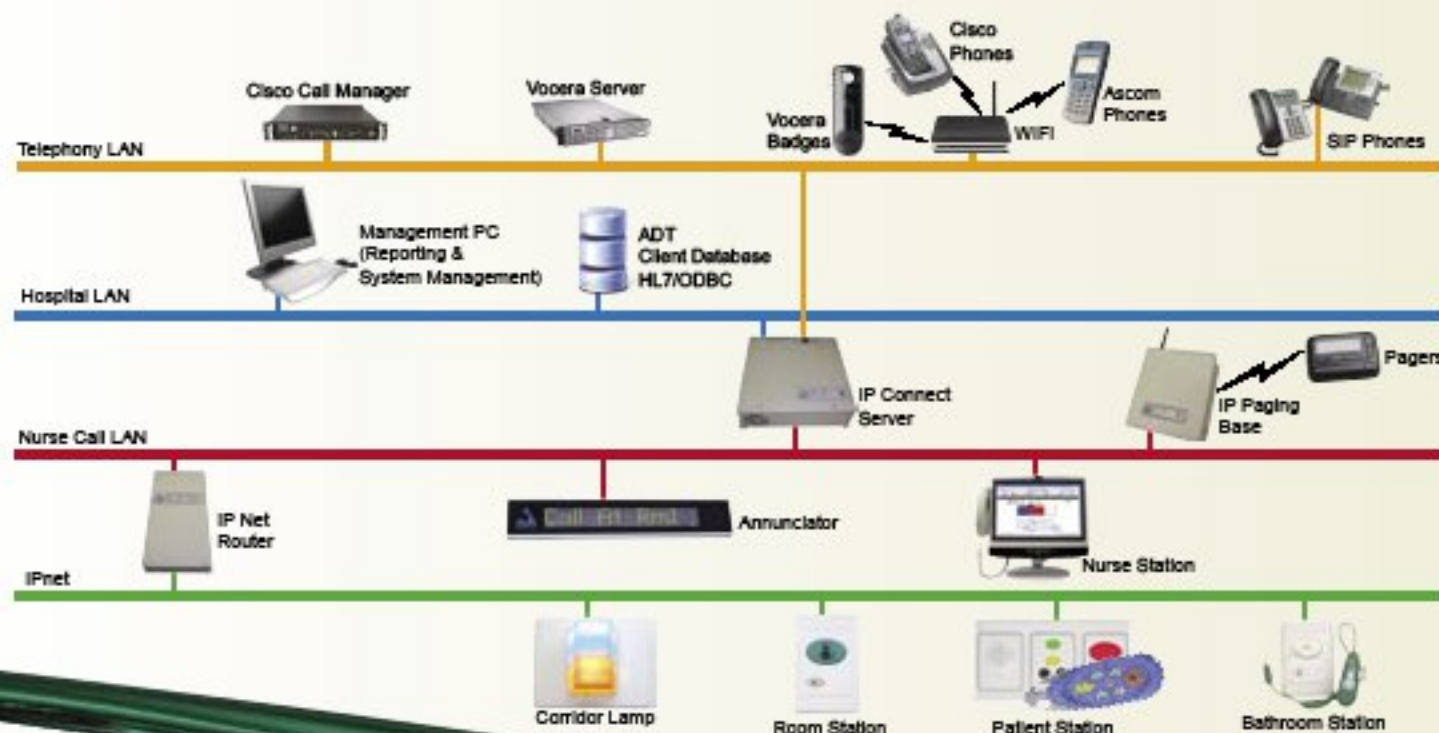

IP Connect - The Single Server Solution

IP Connect is Austco's application server that links nurses, doctors, administrators and support personnel with the information and communications technologies needed to improve the care delivery process, reduce costs, manage workflows, increase efficiencies and handle given tasks in real-time. TACERA with IP Connect has its own suite of interface modules based on industry standards to help lower your costs by eliminating expensive middleware and multiple server platforms from other vendors.

The IP Hospital Solution That Works

IP Connect simply and seamlessly integrates a wide range of hardware, software and database systems.

TACERA Allows You To

- View real-time patient and staff calls for assistance across your entire facility or groups of facilities.
- Integrate all information and message sources within the facility into one audio visual device.
- Access instant messaging to teams or specific onsite or offsite groups.
- Deliver clinical care information and patient data to local, remote and wireless staff stations.

Multilevel Comprehensive Reporting

TACERA comes standard with acute care specific management reporting in real-time, accessing existing databases via HL7 or ODBC to bring you accurate reports 24/7 for individual wards or all your wards as needed.

Compatible with Existing Systems

- My electronic patient records
- My care planning software
- My telephone system
- My wireless phones and paging systems
- My fire alarm system

TACERA has been designed to connect to all the most popular systems on the market with industry standard protocols to protect your investment and deliver hassle free seamless convergence at an affordable price.
